Subject Index

A

Abies grandis (*see* Fir)
Abscisic acid
  differential binding of nuclear proteins, *Cat1* catalase promoter, 1373
  disruption of kernel growth and development, heat stress, corn, 45
  gibberellic acid and, counteractive effects, pH and malate in barley aleurone, 359
  high osmoticum and, differential accumulation of manganese-superoxide dismutase transcripts, maize, 173
  metabolites and, response, cultured maize cells, 135
  7′-methyl group, biological activity, wheat embryo germination, 1279
  root growth maintenance, low water potentials, corn, 607
Acclimation, changes in temperature, soybean nodules, 263
Acetate, pH and, regulation of periplasmic carbonic anhydrase expression, *Chlamydomonas reinhardtii*, 103
Acetyl-coenzyme A carboxylase, gene, *Brassica napus*, 793
Acetylene, $^{15}N_2$ conversion ratio, root nodules, *Myrica gale*, 1041
O-Acetylserine(thiol)-lyase, modulation of cysteine biosynthesis, chloroplasts, transgenic tobacco, 887
Acid invertase, potato tuber, complete nucleotide sequence, 397
Acid phosphatase, potato tuber, significant phosphotyrosine phosphatase activity, 223
Acremonium typhinum, purification and characterization, abundant expression, infected host grass, 1
Action potentials, cytoplasmic ion activities, liverwort, 1073
Acyl carrier proteins, three different cDNAs, *Cuphea lanceolata*, 785
Adenosine triphosphatase, K^+-stimulated, ATP-dependent proton concentration, inner envelope vesicles of pea, 731
ADP-ribosylation factor, family from *Arabidopsis*, GTP-binding protein, 809
Aging
  development of pea leaf, gene expression, chlorophyll and heme biosynthesis, 537
  mature-senescent barley leaves, sensitivity of superoxide dismutase transcript levels, oxidative stress, 1033
Agrobacterium, herbicide-resistant tobacco plants, rat cytochrome P4501A1 and yeast NADPH-cytochrome P450 oxidoreductase, fused enzyme expression, 17
Alcohol, fermentation and glycolysis, differential transcript levels of genes, rice under submergence stress, 1015
Aldolase, plastid class I and cytosol class II, *Euglena gracilis*, 1137
Aleurone, transformed maize, endosperm protoplasts, regulation of gene expression, 929
Alfalfa, isoflavonoid metabolism, effects of heavy metals, root immersion, 195
Alkaline phosphatase, specificity of hydrolysis of phytic acid, alkaline phytase, lily pollen, 1489
Allele, *Lhcb4*, cDNA, Scots pine, 1693
Allium cepa (*see* Onion)
Alternaria alternata, toxin-induced disruption of sphingolipid metabolism, accumulation, free sphingoid bases, 1085
Alternative oxidase
  regulation by pyruvate, soybean mitochondria, 1421
  silencing and overexpression, respiration, transgenic tobacco, 1503
Aluminum
  -induced rapid root inhibition and changes, cell-wall components, squash seedlings, 971
  rapid uptake into cells, intact soybean root tips, 1107
  response to stress, differential exudation of polypeptides, *Triticum aestivum* root, 151
Amine oxidase, pea seedling, crystalline studies, 1205
γ-Aminobutyric acid, pH homeostasis, ammonium assimilation, carrot cell suspensions, 513
Amino acids, derived sequence and cDNA, chloroplastic copper/zinc-superoxide dismutase, aspen, 1231
1-Aminocyclopropane-1-carboxylate oxidase, cDNA sequence, *Pelargonium*, 797
1-Aminocyclopropane-1-carboxylate synthase, turnover in tomato cells, regulation, protein phosphorylation and dephosphorylation, 529
1-Aminocyclopropane-1-carboxylic acid synthase, induction of ethylene biosynthesis in tobacco, *Trichoderma viride* xylanase, 1049
Ammonium
  assimilation, role of γ-aminobutyric acid in pH homeostasis, carrot cell suspensions, 513
  stimulation of nitrate and nitrite efflux, barley seedlings, 1293
Amygdalin, use during seedling development, black cherry, 437
Anion, selectivity, slow anion channels, plasma membrane of *Vicia faba* guard cells, 383
Annexin-like protein, association with plant vacuoles, celery, 1403
Anoxia, differential mRNA induction in corn seedlings, glycolytic and ethanolic pathways, 1575
Anthers, immature, S-ribonuclease gene expression, *Petunia hybrida*, 25
Antiporter, $Mg^{2+}/2H^+$, solubilization, lutoid tonoplast from rubber tree latex, 79
Anthranilate synthase subunit I, functional expression, *Arabidopsis thaliana*, *Escherichia coli*, 353
Apium graveolens (*see* Celery)
Apoplastic peroxidases, lignification, needles of Norway spruce, 53
Apoproteins, assembly of light-harvesting complexes, photosystem II, 829
Apple, β-galactosidase, activity against cell wall polysaccharides, related cDNA clone, 521
Aquaporin, mercury-insensitive, homolog of tonoplast water channel protein TIP, *Arabidopsis thaliana* plasma membrane, 1325
Arabidopsis thaliana
  ADP-ribosylation factor family, GTP-binding protein, 809
  anonymous cDNA clones, large-scale partial sequencing, 1235
  BN115 gene, low-temperature response, winter *Brassica napus*, 917
  chloroplast RNA-binding protein gene, encoding of multiple mRNAs, different 5′ ends, 303
  cloning and sequencing, serine/threonine protein kinase, 1229
  cloning of cDNA, 3-ketoacyl-acyl carrier protein synthase III, 801
  cloning of temperature-regulated gene, chloroplast ω-3 desaturase, 1615
  cytoplasmic ribosomal protein S15a gene, nucleotide and protein sequences, 401
  DNA topoisomerase II cDNA, 1701
  ERD15, 1707
  expression, three divergent *Srp54* genes, 1157
  expression of *Akr*, coincidence, chloroplast development, 1261
  fate of influorescence meristems, control by developing fruits, 863
  fertile mutant, two mesophyll cell chloroplasts, 1169
  functional expression, anthranilate synthase subunit I, *Escherichia coli*, 353
  genomic sequence, calnexin homolog, 1691
  high-oleate oilseeds, failure to develop at low temperature, 421
  inhibition of threonine dehydratase, 1257
  metabolic regulation, gene encoding glutamine-dependent asparagine synthetase, 1347
  mutant, deficiency, elongation of palmitic acid, 143
  mutant deficient in chloroplast ω6 desaturase activity, complementary gene, 1453
  mutant with increased levels, stearic acid, 1443
  mutation at *fad8* locus, second chloroplast ω-3 desaturase, 1609
  PHYC gene, 813

plasma membrane, mercury-insensitive aquaporin, homolog of tonoplast water channel protein TIP, 1325
5′ proximal regions, nitrate reductase genes, nitrate-induced transcription in transgenic tobacco, 477
rhd6 mutation, root hair initiation, auxin- and ethylene-associated process, 1335
salicylic acid-binding activity, salicylic acid-inhibitable catalase activity, 1675
tall and dwarf mutants, metabolism of gibberellin A_{20} to gibberellin A_1, 1367
third highly conserved group 1 Lea gene, 787
Arenchyma, carbon dioxide, assimilation, *Typha latifolia* leaves, 1065
Ascorbic acid, dehydroascorbic acid and, transport across protoplast and vacuole membranes, barley, 187
Asparagine synthetase, glutamine-dependent, metabolic regulation, *Arabidopsis thaliana*, 1347
Aspartate aminotransferase-P_2 gene, *Lupinus angustifolius*, 1683
Aspartate kinase-homoserine dehydrogenase gene family, molecular genetics, corn, 1303
Aspen
chloroplastic copper/zinc-superoxide dismutase, cDNA and derived amino acid sequence, 1231
Populus tremula × *Populus tremuloides*, metabolic pathway, indole-3-acetic acid in apical shoots, 1511
Aspergillus aculeatus, rhamnogalacturonan α-L-rhamnopyranohydrolase, pectin, 241
Auxin
-associated process, root hair initiation in *Arabidopsis thaliana*, 1335
cell-suspension cultures of *Flaveria bidentis*, cloning and regulation, flavonol 3-sulfotransferase, 485
-inducible element, soybean SAUR promoters, tobacco, 37
Avocado, fruit development and ripening, regulation, glutamate dehydrogenase and glutamine synthetase, 217

B

Bacteria, production of antibacterial proteins, human lactoferrin cDNA, tobacco, 977
Bark, storage protein and related wound-induced gene, differential induction by nitrogen, poplar, 211
Barley
acquired resistance, 2,6-dichloroisonicotinic acid, mildew, 1269
aleurone, counteractive effects of abscisic acid and gibberellic acid, pH and malate, 359
choline-*O*-sulfate biosynthesis, 1187
distribution of pyruvate dehydrogenase complex activities, chloroplasts and leaves, 1633
Kas gene family, β-ketoacyl-acyl carrier protein synthesis, 1711
leaf
sensitivity of superoxide dismutase transcript levels, oxidative stress, 1033
transport of ascorbic and dehydroascorbic acids, protoplast and vacuole membranes, 187
nucleotide sequence of cDNA, heat-shock protein, 815
seedling, stimulation of nitrate and nitrite efflux, ammonium, 1293
Barnyardgrass, inhibition of 4-hydroxyphenylpyruvate dioxygenase, sulcotrione, 1429
Bean
genotypes lacking nodule-enhanced isoform, glutamine synthetase, 1389
release of photosynthetic protein catabolites, blebbing from thylakoids, 1547
seed-specific gene activation, mediation by Cre/*lox* site-specific recombination system, 447
two species, control of paraheliotropism, 1567
Beet
cDNA, vacuolar H^+-pyrophosphatase, 375
leaf
blue-green fluorescence in mesophyll, iron deficiency, 127
plasma membrane sucrose-H^+ symporter, 991
membranes, stereospecificity and immunoreactivity, NADH-ferricyanide reductase, 1103
seedling, prolonged dark growth, modifications of etioplasts in cotyledons, 1555
Beta vulgaris (*see* Beet)
Bioenergetics, 3,5-dibromo-4-hydroxybenzonitrile, pea plant mitochondria, 1483
Blebbing, thylakoids, release of photosynthetic protein catabolites, bean, 1547
Brassica, choline-*O*-sulfate biosynthesis, 1187
Brassica juncea (*see* Mustard)
Brassica napus (*see* Canola)
Broad bean
cryopreservation of mitochondria, tool for protein import, organello protein synthesis studies, 159
leaf tissues, proton-peptide cotransport, 1023
mesophyll cells, stimulation of K^+ activity, cAMP, 957
plasma membrane of guard cells, anion selectivity, slow anion channels, 383
two types of leaf cells, regulation of K^+ channels, protein phosphatases 1 and 2A, 963
Bromoxynil, effects on bioenergetics, pea mitochondria, 1483
Bromus inermis, freezing tolerance, dehydrin gene expression, 1213

C

Cadmium, tolerance in tomato cells, increased activity, γ-glutamylcysteine synthetase, 233
Calcium, cytoplasmic ion activities, liverwort, 1073
Calmodulin-binding glutamate decarboxylase, ubiquitous protein in petunia organs, developmental regulation, 1381
Calnexin, homolog, genomic sequence, *Arabidopsis thaliana*, 1691
Canola
gene encoding acetyl-coenzyme A carboxylase, 793
seed, ethylene production during development, 601
winter, low-temperature response, *BN115* gene, 917
Carbon
export, mature peach leaves, 591
-isotope composition of biochemical fractions, regulation of carbon balance in leaves, *Clusia minor*, 493
metabolite signals, source/sink relations, cereal seedlings, 1235
partitioning and gas exchange, root zone salinity, celery leaves, 281
starvation and endoglycosidase activities, production of "unconjugated *N*-glycans," *Silene alba* cell-suspension cultures, 779
Carbon dioxide
arenchyma, assimilation, *Typha latifolia* leaves, 1065
elevated atmospheric, acclimation of respiratory O_2 uptake, field-grown native species, 1163
exchange and fluorescence measurements, sunflower leaf, 689
high atmospheric partial pressure, photosynthetic acclimation, pea and soybean, 661
uptake and electron transport, wild-type and starchless mutant of *Nicotiana sylvestris*, 679
Carbonic anhydrase, regulation of periplasmic expression, *Chlamydomonas reinhardtii*, acetate and pH, 103
Cardiolipin, biosynthesis in mung bean mitochondria, 1527
Carrot
cell suspensions, ammonium assimilation, role of γ-aminobutyric acid in pH homeostasis, 513
Fourier-transform Raman and Fourier-transform infrared spectroscopy, cell walls and their components, 1623
Carthamus tinctorius, encoding glycerol-3-phosphate acyl transferase, nucleotide sequence, cDNA, 1713
Catalase
primary gene, *Nicotiana tabacum* and *N. sylvestris*, 399
salicylic acid-inhibitable activity, salicylic acid-binding activity, variety of plant species, 1675
Cations, transient Cl^- and K^+ currents, action potential, *Chara inflata*, 651
Celery
42-kilodalton annexin-like protein, association with plant vacuoles, 1403
leaf, gas exchange and carbon partitioning, root zone salinity, 281
stressed by excess macronutrients, mannitol metabolism, 503
Cell cycle, regulation in plants, 823
Cell wall
aluminum-induced inhibition, squash root seedlings, 971

circadian oscillations of a transcript, germin-like protein, *Sinapis alba*, 905
Fourier-transform Raman and Fourier-transform infrared spectroscopy, five higher plants, 1623
gravitropically responding pea epicotyls, differential changes in size distribution, xyloglucan, 755
metabolism in ripening tomato fruit, 575
mung bean hypocotyls, localization, phenoloxidase
polysaccharides, β-galactosidase activity, apple, 521
ripening of nectarine fruit, electrical impedance measurements, 165
Cereals
C_3 and C_4, efficiency of nitrogen use, 407
seedling, gene expression and source/sink relations, metabolite signals, 1235
Chara gymnophylla, droplets, depolarization-activated K^+ channel, 313
Chara inflata, action potential, transient Cl^- and K^+ currents, 651
Cherry, black
seedling development, use of amygdalin, 437
stems and leaves, immunocytochemical localization, prunasin hydrolase and mandelonitrile lyase, 1285
Chilling, ripening of nectarine fruit, electrical impedance measurements, 165
Chlamydomonas reinhardtii
biogenesis of thylakoid membranes, 583
large subunit of ribulose-1,5-bisphosphate carboxylase/oxygenase, inhibited expression of chloroplast gene, nuclear mutation, 673
regulation of periplasmic carbonic anhydrase expression, acetate and pH, 103
Chloride
cytoplasmic ion activities, liverwort, 1073
transient currents, action potential, *Chara inflata*, 651
Chlorophyll
fluorescence, light harvesting, regulation in green plants, 415
gene expression, developmental age of pea leaf, 537
Chloroplasts
copper/zinc-superoxide dismutase, cDNA and derived amino acid sequence, aspen, 1231
ω-3 desaturase, *fad8* locus mutation, *Arabidopsis thaliana*, 1609
ω-6 desaturase activity, *Arabidopsis thaliana* mutant, complementary gene, 1453
development, *Akr* gene expression, *Arabidopsis thaliana*, 1261
genetically programmed dedifferentiation, plastome-genome incompatibility, evening primrose, 367
inhibited gene expression by nuclear mutation, large subunit of ribulose-1,5-bisphosphate carboxylase/oxygenase, *Chlamydomonas reinhardtii*, 673
inner envelope vesicles of pea, K^+-stimulated ATPase, ATP-dependent proton concentration, 731
mitochondria from leaves of different species, distribution, pyruvate dehydrogenase complex activities, 1633
modulation of cysteine biosynthesis, transgenic tobacco overexpressing cysteine synthase, 887
pea, intrathylakoid pH, violaxanthin deepoxidation, 1647
phosphate translocator in transgenic tobacco, distribution of assimilate, starch and sugar in tobacco, 1123
RNA-binding protein gene, encoding of multiple mRNAs, *Arabidopsis*, 303
two mesophyll cells, *arc6*, fertile *Arabidopsis* mutant, 1169
Choline-*O*-sulfate, biosynthesis in *Limonium*, *Brassica*, corn and sunflower, 1187
Chromosome, group of proteins specifically released by spermine, loss of DNA-binding activity, phosphorylation, 559
Chymotrypsin, inhibitor I in potato, peptide homology, transgenic tobacco, 771
Cinnamoyl-coenzyme A:NADP oxidoreductase, purification and characterization, *Eucalyptus gunnii*, 625
Circadian rhythm, oscillations of a transcript, encoding a germin-like protein, *Sinapis alba*, 905
Citrus paradisi, gene *c-ino*, homology to *tur1* and *ino1* from yeast and *Spirodela*, 1689
Cladosporium fulvum, plant defense response, fungal pathogens, G-protein-mediated changes in tomato, 97
Clarkia, floral scent production, 1533
Clusia minor, leaf, regulation of carbon balance, carbon-isotope composition of biochemical fractions, 493
Cold, hardening, short-term shift to low temperature, winter rye leaves, 983
Conocephalum conicum (*see* Liverwort)
Copper-zinc-superoxide dismutase, cDNA and derived amino acid sequence, aspen, 1231
Corm, quillwort, expression, sporophytic storage proteins, 1395
Corn
aspartate kinase-homoserine dehydrogenase gene family, molecular genetics, 1303
Cat1 catalase promoter, differential binding of nuclear proteins, abscisic acid, 1373
cDNA, nucleotide sequence, class II acidic β-1,3-glucanase, 1709
choline-*O*-sulfate biosynthesis, 1187
differential accumulation, manganese-superoxide dismutase transcripts, response to abscisic acid and high osmoticum, 173
disruption of kernel growth and development, heat stress, 45
endosperm, storage product genes, coordinated transcriptional regulation, 713
formation and stabilization, rhizosheaths, 179
Fourier-transform Raman and Fourier-transform infrared spectroscopy, cell walls and their components, 1623
G-box-binding complex, two genes that encode GF14 proteins, 1593
Illinois long-term selection maize strains, detection and sequencing, transposable element ILS-1, 803
induction and turnover, nitrate reductase, 1145
32-kDa NADH dehydrogenase, characterization, submitochondrial localization, 1115
14–3–3-like protein, 30-kilodalton protein, fusicoccin receptor preparations, 1497
metabolism and synthesis, indole-3-acetic acid, 343
mutant ys1, iron inefficiency, defect in uptake of iron phytosiderophores, 71
regulation of leaf nitrate reductase activity, gene expression and protein phosphorylation, 1667
response of cultured cells to abscisic acid metabolites, 135
root growth maintenance, low water potentials, 607
salicylic acid-binding activity, salicylic acid-inhibitable catalase activity, 1675
seedling, glycolytic and ethanolic pathways, differential mRNA induction and hypoxia and anoxia, 1575
structural features of the *SUS1* gene and protein, 1659
transformed, aleurone and endosperm protoplasts, regulation of gene expression, 929
Zlp gene expression, 1471
Cotton
cDNA encoding ribosomal protein S16, 1219
developing ovules, multiple cDNAs, vacuolar H^+-ATPase subunit B, 393
Cotyledons
modifications of etioplasts, prolonged dark growth, beet seedling, 1555
sunflower, influence of light, peroxisome membrane proteins, 293
p-Coumarate, biosynthesis of *p*-hydroxybenzoate, cell-free extracts, *Lithospermum erythrorhizon*, 271
Cryopreservation, mitochondria of broad bean and tobacco, tool for protein import, organello protein synthesis studies, 159
Cucumber, salicylic acid-binding activity, salicylic acid-inhibitable catalase activity, 1675
Cucurbita maxima (*see* Squash)
Cucurbita (*see* Pumpkin)
Cuphea lanceolata, three different cDNAs encoding acyl carrier proteins, 785
Cyclic adenosine monophosphate, stimulation of K^+ channel activity, mesophyll cells, *Vicia faba*, 957
Cyclin-dependent kinase, cell cycle regulation in plants, 823
Cysteine, modulation of biosynthesis in chloroplasts, transgenic tobacco overexpressing cysteine synthase, 887

Cytochrome P450-dependent diterpenoid hydroxylases, regulation of oleoresinosis, grand fir, 999
Cytochrome P4501A1, yeast NADPH-cytochrome P450 oxidoreductase and, fused enzyme, herbicide-resistant tobacco plants, 17
Cytokinin, disruption of kernel growth and development, heat stress, corn, 45
Cytoplasm
  acidification and secondary metabolite production, *Morinda citrifolia*, *Petunia hybrida*, and *Linum flavum*, 723
  ion activities, action potentials, liverwort, 1073
  ribosomal protein S15a gene, nucleotide and protein sequences, *Arabidopsis thaliana*, 401
Cytosol, class II aldolase, plastid class I, *Euglena gracilis*, 1137

D

Davis-Roberts hypothesis, metabolic control of anaerobic glycolysis, tomato, 1179
Defense-related proteins, transformed root cultures, *Trichosanthes kirilowii*, 1195
Dehydration-induced gene *ERD15*, *Arabidopsis thaliana*, 1707
Dehydroascorbic acid, ascorbic acid and, transport across protoplast and vacuole membranes, barley, 187
ω-3 Desaturase, chloroplast, *fad8* locus mutation, *Arabidopsis thaliana*, 1609
ω-6 Desaturase, chloroplast activity, *Arabidopsis thaliana* mutant, complementary gene, 1453
3,5-Dibromo-4-hydroxybenzonitrile, effects on bioenergetics, pea plant mitochondria, 1483
2,6-Dichloroisonicotinic acid, acquired resistance in barley, mildew, 1269
Diethyldithiocarbamic acid, inhibition of the octadecanoid signaling pathway, wound induction, proteinase inhibitors in tomato leaves, 337
DNA
  complementary
    1-aminocyclopropane-1-carboxylate oxidase, *Pelargonium*, 797
    anonymous *Arabidopsis* clones, large-scale partial sequencing, 1235
    clone encoding ferredoxin-$NADP^+$ reductase, *Chlamydomonas reinhardtii*, 1715
    cloning and nucleotide sequences, α_1 and α_2 thionins, hexaploid wheat endosperm, 1221
    corn, nucleotide sequence, class II acidic β-1,3-glucanase, 1709
    derived amino acid sequence and, chloroplastic copper/zinc-superoxide dismutase, aspen, 1231
    DNA topoisomerase II, *Arabidopsis thaliana*, 1701
    drought-induced soybean, D95 family late-embryogenesis-abundant protein, 805
    encoding HD-Zip protein, sunflower, 1687
    encoding 3-ketoacyl-acyl carrier protein synthase III, *Arabidopsis thaliana*, 801
    encoding ribosomal protein S16, cotton, 1219
    β-galactosidase activity, activity against cell wall polysaccharides, apple, 521
    GTP-binding protein, ADP-ribosylation factor family, *Arabidopsis thaliana*, 809
    human lactoferrin, production of antibacterial proteins, tobacco, 977
    isoforms of the δ^9-stearoyl-acyl carrier protein desaturase, *Thunbergia alata* endosperm, 807
    Lhc5, Scots pine, 1695
    Lhcb4 alleles, Scots pine, 1693
    low molecular mass heat-shock protein, opium poppy, 811
    multiple, vacuolar H^+-ATPase subunit B, developing cotton ovules, 393
    nucleotide sequence
      Carthamus tinctorius encoding glycerol-3-phosphate acyl transferase, 1713
      heat-shock protein, barley, 815
      P2 60S acidic ribosomal protein, guayule, 395
    pollen-specific, nucleotide sequence, sunflower, 403
    potato tuber acid invertase, complete nucleotide sequence, 397
    rice full-length clone, encoding of a polyubiquitin, 791
    structural features, maize *SUS1* gene and protein, 1659
    three different ones, encoding of acyl carrier proteins, *Cuphea lanceolata*, 785
    vacuolar H^+-pyrophosphatase, beet, 375
  Cre/*lox* site-specific recombination system, mediation of seed-specific gene activation, 447
  -loss of binding activity, group of chromosomal proteins specifically released by spermine, 559
DNA topoisomerase II, cDNA from *Arabidopsis thaliana*, 1701
Drought
  -induced soybean cDNA, D95 family late-embryogenesis-abundant protein, 805
  -stressed soybean nodules, role of oxygen, regulation of nitrogenase activity, 949
Dunaliella salina, extreme halotolerance, salt-induced 60-kilodalton plasma membrane protein, 1359

E

Echinocloa crus-gali (*see* Barnyardgrass)
Electrical impedance, ripening of nectarine fruit, 165
Electric potential, membrane-surface, Gouy-Chapman-Stern model, mineral rhizotoxicity, 1583
Electron, transport rates and CO_2 uptake, wild-type and starchless mutant of *Nicotiana sylvestris*, 679
Electrophysiology, root-hair cells of *Sinapis alba*, H^+/Cl^- symporter, 1131
Eleucine coracana, nucleotide sequence, nuclear $tRNA^{Gly}$, 1217
Elongation, control of internode length, indole-3-acetic acid, pea, 1521
Elongation factor 1, subunit α, induction of translation, wounding in potato tubers, 897
Emboli, water-stress, collapse of, tracheids of *Thuja occidentalis*, 1639
Endoglycosidase, increased activities and production of "unconjugated *N*-glycans," *Silene alba* cell-suspension cultures, 779
Endophyte, fungal proteinase, abundant expression, infected host grass, 1
Endoplasmic reticulum, provacuoles of oat root tip cells and, vacuolar-type H^+-ATPases, 1313
Endosperm
  corn, storage product genes, coordinated transcriptional regulation, 713
  protoplasts and transformed maize aleurone, regulation of gene expression, 929
  Thunbergia alata, cDNAs, isoforms of the Δ^9-stearoyl-acyl carrier protein desaturase, 807
  in vitro systems, metabolism and synthesis of indole-3-acetic acid, corn, 343
  wheat, cDNA cloning and nucleotide sequences, α_1 and α_2 thionins, 1221
Enzymes, nitrate reduction, anaerobic germination, rice, 1605
Epicotyls, pea, differential changes in size distribution, xyloglucan in cell walls, 755
Erwinia chrysanthemi, three-dimensional structure of pectate lyase E, 849
Escherichia coli
  functional expression, *Arabidopsis thaliana* anthranilate synthase subunit I, 353
  overproduction, characterization, soybean ferric leghemoglobin reductase, 203
Ethanol, fermentative pathways, differential mRNA induction, hypoxia and anoxia in corn seedling, 1575
Ethylene
  -associated process, root hair initiation in *Arabidopsis thaliana*, 1335
  induction of biosynthesis in tobacco, *Trichoderma viride* xylanase, accumulation of 1-aminocyclopropane-1-carboxylic acid synthase and ACC oxidase transcripts, 1049
  production during development, mustard and canola seed, 601
Etioplasts, modifications in cotyledons, prolonged dark growth, beet seedlings, 1555
Eucalyptus gunnii, cinnamoyl-coenzyme A:NADP oxidoreductase, 625
Euglena gracilis, plastid class I and cytosol class II aldolase, 1137
Eukaryotic translation initiation factor, posttranscriptionally modified 18-kilodalton protein, rice, 1413
Euphorbia characias, photoautotrophic cell suspension, light stress, oxidative cell damage, 941

F

Fermentation, glycolytic and ethanolic pathways, differential mRNA induction, hypoxia and anoxia in corn seedling, 1575
Fern, *Pteris vittata*, ribulose-1,5-bisphosphate carboxylase/oxygenase small subunit gene, 1685
Ferredoxin-$NADP^+$ reductase, cDNA clone, *Chlamydomonas reinhardtii*, 1715
Ferric leghemoglobin reductase, soybean, overproduction in *Escherichia coli*, 203
Fescue, leaf, growth, response of fructan to water deficit, 329
Festuca arundinacea (*see* Fescue)
Fir, grand, regulation of oleoresinosis, 999
Flaveria bidentis, cell-suspension cultures, cloning and regulation, flavonol 3-sulfotransferase, 485
Flavonoid 3′,5′-hydroxylase, microsomal membrane fraction, *Petunia hybrida* flowers, 633
Flavonol 3-sulfotransferase, cloning and regulation, cell-suspension cultures, *Flaveria bidentis*, 485
Fluorescence
  blue-green, iron deficiency, mesophyll of beet leaves, 127
  light harvesting, regulation in green plants, 415
  measurements and CO_2 exchange, sunflower leaf, 689
Fourier transform, Raman and infrared spectroscopy, cell walls and their components, five higher plants, 1623
Foxtail, giant, herbicidal activity, isopropylmalate dehydrogenase inhibitor, 321
Freezing, tolerance in *Bromerus inermis* and *Secale cereale*, dehydrin gene expression, 1213
Fructan, response to water deficit, growing leaves, tall fescue, 329
Fusarium moniliforme, toxin-induced disruption of sphingolipid metabolism, accumulation, free sphingoid bases, 1085
Fusicoccin, receptor preparations, 30-kilodalton protein, 14–3–3-like protein, 1497

G

β-Galactosidase, activity against cell wall polysaccharides, related cDNA clone, apple, 521
Gas exchange, carbon partitioning and, root zone salinity, celery leaves, 281
Gene
  acetyl-coenzyme A carboxylase, *Brassica napus*, 793
  acquired resistance in barley, mildew, 2,6-dichloroisonicotinic acid, 1269
  Akr, expression coinciding with chloroplast development, *Arabidopsis thaliana*, 1261
  anonymous *Arabidopsis* cDNA clones, large-scale partial sequencing, 1235
  antioxidant, mRNA accumulation, *Nicotiana plumbaginifolia*, 1007
  Arabidopsis chloroplast RNA-binding protein, encoding of multiple mRNAs, different 5′ ends, 303
  arc6, two mesophyll cell chloroplasts, fertile *Arabidopsis* mutant, 1169
  Asr2, genomic nucleotide sequence, tomato, 1699
  BN115, low-temperature response, winter *Brassica napus*, 917
  Cat1 catalase promoter, differential binding of nuclear proteins, corn, 1373
  chloroplast, large subunit of ribulose-1,5-bisphosphate carboxylase/oxygenase, *Chlamydomonas reinhardtii*, 673
  c-ino, homology to *tur1* and *ino1* from yeast and *Spirodela*, *Citrus paradisi*, 1689
  Cre/*lox* site-specific recombination system, mediation of seed-specific gene activation, 447
  cytoplasmic ribosomal protein S15a, nucleotide and protein sequences, *Arabidopsis thaliana*, 401
  dehydrin, freezing tolerance in *Bromus inermis* and *Secale cereale*, 1213
  developmental age of pea leaf, chlorophyll and heme biosynthesis, 537
  differential transcript levels, glycolysis and alcohol fermentation, rice under submergence stress, 1015
  encoding GF14 proteins in corn, G-box-binding complex, 1593
  ERD15, *Arabidopsis thaliana*, 1707
  expression and protein phosphorylation, regulation of nitrate reductase, corn leaf, 1667
  expression and source/sink relations, metabolite signals, cereal seedlings, 1235
  Kas, β-ketoacyl-acyl carrier protein synthesis, 1711
  molecular
    alteration of respiration, transgenic tobacco, 1503
    aspartate kinase-homoserine dehydrogenase gene family, corn, 1303
  nitrate reductase, nitrate-induced transcription, 5′ proximal regions of *Arabidopsis* nitrate reductase genes in transgenic tobacco, 477
  nuclear $tRNA^{Gly}$, nucleotide sequence, *Eleucine coracana*, 1217
  PHYC, *Arabidopsis thaliana*, 813
  primary leaf catalase, *Nicotiana tabacum* and *N. sylvestris*, 399
  proteinase inhibitor II, genomic nucleotide sequence, gene, 1681
  psbS, nucleotide sequence, tomato, 1703
  P-type H^+-ATPase genes, assessment of number and expression, tomato, 547
  regulation of expression, transformed maize aleurone and endosperm protoplasts, 929
  rhd6 mutation in *Arabidopsis thaliana*, root hair initiation, auxin- and ethylene-associated process, 1335
  ribulose-1,5-bisphosphate carboxylase/oxygenase small subunit, *Pteris vittata*, 1685
  short- and long-term changes in expression, low water potential, potato cell-suspension cultures, 703
  soybean SAUR promoters, auxin-inducible element, tobacco, 37
  Srp54, expression, *Arabidopsis thaliana*, 1157
  storage product, coordinated transcriptional regulation, corn endosperm, 713
  structural, deletion of alteration of respiratory properties, NADH-dehydrogenase subunit 4 of *Synechocystis* 6803, 1435
  sugar-inducible expression, block by inhibitors of protein phosphatases 1 and 2A, sweet potato, 567
  SUS1, structural features, corn, 1659
  temperature-regulated, chloroplast ω-3 desaturase, *Arabidopsis thaliana*, 1615
  third highly conserved group 1 Lea, *Arabidopsis thaliana*, 787
  wound-induced, poplar bark storage protein, differential induction by nitrogen, 211
  Zlp, characterization and expression, corn, 1471
Genome
  nucleotide sequence, tomato *Asr2*, 1699
  -plastome incompatibility, genetically programmed chloroplast dedifferentiation, evening primrose, 367
  sequence of calnexin homolog, *Arabidopsis thaliana*, 1691
Genotype, lacking nodule-enhanced isoform, glutamine synthetase, bean, 1389
Germin-like protein, circadian oscillations of a transcript, *Sinapis alba*, 905
Germination
  anaerobic, expression of enzymes and nitrate reduction, rice, 1605
  corn *Cat1* catalase promoter, differential binding, nuclear proteins, 1373
  reformation of central vacuole, accumulation of H^+-pyrophosphatase and H^+-ATPase, pumpkin seed, 61
  wheat embryo, biological activity, 7′-methyl group of abscisic acid, 1279
GF14 proteins, two genes that encode, G-box-binding complex, corn, 1593
Gibberellic acid, abscisic acid and, counteractive effects, pH and malate in barley aleurone, 359
Gibberellin A_{20}, metabolism to gibberellin A_1, tall and dwarf mutants, rice and *Arabidopsis thaliana*, 1367
Globulins, sporophytic storage proteins, quillwort corm, 1395
β-Glucan, structure and function of Golgi complex, rice cells, 119
β-1,3-Glucanase, class II acidic, nucleotide sequence, maize cDNA, 1709
β-Glucuronidase, activity in transgenic tobacco and intron in rice, rice triosephosphate isomerase 5′ sequence, 459
Glutamate decarboxylase, calmodulin-binding, ubiquitous protein in petunia organs, developmental regulation, 1381
Glutamate dehydrogenase, regulation of glutamine synthetase and, avocado fruit development and ripening, 217

Glutamine-dependent asparagine synthetase, metabolic regulation, *Arabidopsis thaliana*, 1347
Glutamine synthetase, lack of nodule-enhanced isoform, genotypes, bean, 1389
γ-Glutamylcysteine synthetase, increased activity, tomato cells selected for cadmium tolerance, 233
Glycerol-3-phosphate acyl transferase, *Carthamus tinctorius*, nucleotide sequence, cDNA, 1713
Glycolysis
  anaerobic, metabolic control, lactate dehydrogenase, 1179
  differential transcript levels of genes, alcohol fermentation, rice under submergence stress, 1015
  ethanolic fermentative pathways and, differential mRNA induction, hypoxia and anoxia in corn seedling, 1575
Golgi complex, structure and function in rice cells, 119
Gossypium hirsutum (*see* Cotton)
Gouy-Chapman-Stern model, membrane-surface electrical potential, mineral rhizotoxicity, 1583
G-protein-mediated changes, host plasma membrane redox reactions, tomato, 97
Gravitropism, differential changes in size distribution, cell walls of gravitropically responding pea epicotyls, 755
Greening, initial, biogenesis of thylakoid membranes, *Chlamydomonas reinhardtii*, 583
GTP-binding proteins
  ADP-ribosylation factor family from *Arabidopsis*, 809
  small, membrane biogenesis, 1
Guard cells, plasma membrane, anion selectivity of slow anion channels, *Vicia faba*, 383
Guayule, P2 60S acidic ribosomal protein, nucleotide sequence of cDNA, 395

H

Halotolerance, *Dunaliella salina*, salt-induced 60-kilodalton plasma membrane protein, 1359
H^+-ATPase
  genes in tomato, assessment of number and expression, 547
  subunit B from developing cotton ovules, multiple cDNAs, 393
  vacuolar, accumulation, reformation of central vacuole in germinating pumpkin seed, 61
  vacuolar-type, association with endoplasmic reticulum and provacuoles, oat root tip cells, 1313
H^+/Cl^- symporter, root-hair cells of *Sinapis alba*, 1131
Heat-shock protein
  low molecular mass, cDNA, opium poppy, 811
  nucleotide sequence of cDNA, barley, 815
Heat stress, disruption of kernel growth and development, corn, 45
Helianthus annuus (*see* Sunflower)
Heme, synthesis and gene expression, developmental age of pea leaf, 537
Herbicides
  activity of an isopropylmalate dehydrogenase inhibitor, pea and soybean, morning glory and giant foxtail, 321
  inhibition of threonine dehydratase, *Arabidopsis thaliana*, 1257
  -resistant tobacco plants, fused enzyme expression, rat cytochrome P4501A1 and yeast NADPH-cytochrome P450 oxidoreductase, 17
Hevea brasiliensis (*see* Rubber tree)
Homoserine dehydrogenase-aspartate kinase gene family, molecular genetics, corn, 1303
Hordeum vulgare (*see* Barley)
H^+-pyrophosphatase, vacuolar
  accumulation, reformation of central vacuole in germinating pumpkin seed, 61
  beet cDNA, 375
H^+-sucrose symporter, plasma membrane, kinetic analysis of sugar beet leaves, 991
Hydrolysis, phytic acid, alkaline phosphatase, lily pollen, 1489
Hydroponics, freezing tolerance and dehydrin gene expression, *Secale cereale*, *Bromus inermis*, 1213
p-Hydroxybenzoate, biosynthesis from *p*-coumarate and *p*-coumaroyl-coenzyme A, cell-free extracts, *Lithospermum erythrorhizon*, 271
4-Hydroxyphenylpyruvate dioxygenase, inhibition by sulcotrione, barnyardgrass, 1429
N-Hydroxysuccinimidobiotin, reducing side of photosystem I, identification of surface-exposed domains, *Synechocystis*, 617
Hypocotyls, mung bean
  immobilized and free apoplastic pectinmethylesterases, 1151
  localization in cell walls, phenoloxidase
Hypoxia, anoxia in corn seedlings and, differential mRNA induction, glycolytic and ethanolic fermentative pathways, 1575
Hypusine, posttranscriptionally modified 18-kilodalton protein, eukaryotic translation initiation factor, 1413

I

Immunocytochemistry, localization of prunasin hydrolase and mandelonitrile lyase, stems and leaves, black cherry, 1285
Indole-3-acetic acid
  apical shoots of *Populus tremula* × *Populus tremuloides*, metabolic pathway, 1511
  control of internode length, pea, 1521
  metabolism and synthesis, corn, 343
  transport inhibitors *N*-1-naphthylphthalamic acid and morphactin, compression wood formation, *Pinus sylvestris* shoots, 469
Inosine diphosphatase, structure and function of Golgi complex, rice cells, 119
myo-Inositol phosphate synthase, homology of c-*ino* gene, *Citrus paradisi*, 1689
Intron
  β-glucuronidase activity, rice triosephosphate isomerase 5′ sequence, 459
  PHYC gene, *Arabidopsis thaliana*, 813
  regulation of gene expression, transformed maize aleurone and endosperm protoplasts, 929
Ion channel blockers, transient Cl^- and K^+ currents, action potential, *Chara inflata*, 651
Ion mass spectroscopy, secondary, rapid uptake of aluminum, intact soybean root tips, 1107
Ipomea batatas (*see* Potato, sweet)
Iron
  deficiency, blue-green fluorescence, mesophyll of beet leaves, 127
  inefficiency in maize mutant ys1, defect, uptake of iron phytosiderophores, 71
Irradiance, excess, effects on photosynthesis, *Phaeodactylum tricornutum*, 763
Isoetes echinospora (*see* Quillwort)
Isoflavonoid, metabolism in alfalfa, effects of heavy metals, root immersion, 195
Isopropylmalate dehydrogenase, herbicidal activity, pea and soybean, morning glory and giant foxtail, 321

K

β-Ketoacyl-acyl carrier protein synthesis, barley *Kas* gene family, 1711
3-Ketoacyl-acyl carrier protein synthase III, cDNA, *Arabidopsis thaliana*, 801

L

Lactate dehydrogenase, metabolic control, anaerobic glycolysis, tomato, 1179
Lactoferrin, cDNA, production of antibacterial proteins, tobacco, 977
Late-embryogenesis-abundant protein, D95 family, drought-induced soybean cDNA, 805
Latex, rubber tree, lutoid tonoplast, solubilization of $Mg^{2+}/2H^+$ antiporter, 79
Leaf
  barley
    sensitivity of superoxide dismutase transcript levels, oxidative stress, 1033
    transport of ascorbic and dehydroascorbic acids, protoplast and vacuole membranes, 187
  beet
    blue-green fluorescence in mesophyll, iron deficiency, 127
    plasma membrane sucrose-H^+ symporter, 991
  black cherry, immunocytochemical localization, prunasin hydrolase and mandelonitrile lyase, 1285
  broad bean, proton-peptide cotransport, 1023
  celery, gas exchange and carbon partitioning, root zone salinity, 281
  chloroplasts and, different species, distribution of pyruvate dehydrogenase complex activities, 1633

Clusia minor, regulation of carbon balance, carbon-isotope composition of biochemical fractions, 493
corn, nitrate reductase regulation, gene expression and protein phosphorylation, 1667
fescue, growth, response of fructan to water deficit, 329
mung bean, first foliage leaves, ferredoxin-$NADP^+$ oxidoreductase isoforms, 697
pea, developmental age and gene expression, chlorophyll and heme biosynthesis, 537
peach, modeling carbon export out, 591
sunflower, CO_2 exchange and fluorescence measurements, 689
tomato, diethyldithiocarbamic acid, inhibition of octadecanoid signaling pathway, 337
Typha latifolia, assimilation, arenchyma carbon dioxide, 1065
Vicia faba, regulation of K^+ channels, protein phosphatases 1 and 2A, 963
winter rye, short-term shift to low temperature, long-term cold hardening, 983
Light
harvesting, regulation in green plants, 415
induction and turnover, nitrate reductase, corn, 1145
intensity and transient association of new proteins, *Spirulina maxima* phycobilisome, 747
peroxisome membrane protein developmental pattern, sunflower cotyledons, 293
stress and oxidative cell damage, photoautotrophic cell suspension, *Euphorbia characias*, 941
Light-harvesting complex
assembly of photosystem II, 829
photosystem I, organization, assembly during plastid development, 841
Lignification, apoplastic peroxidases, needles of Norway spruce, 53
Lilium longiflorum (*see* Lily)
Lily, pollen, specificity of hydrolysis of phytic acid, alkaline phytase, 1489
Limonium, choline-*O*-sulfate biosynthesis, 1187
Linalool synthase, emission and floral scent production, *Clarkia*, 1533
Lindera benzoin, long-term exposure to elevated atmospheric CO_2, acclimation, respiratory O_2 uptake, 1163
Linum flavum, cytoplasmic acidification, secondary metabolite production, 723
Lipids
deficiency in elongation of palmitic acid, *Arabidopsis* mutant, 143
increased levels of stearic acid, *Arabidopsis* mutant, 1443
Lipoxygenase
cloning of two tomato genes, differential expression, fruit ripening, 109
lox1:Ps:2 gene, pea seed, 1227
Lithospermum erythrorhizon, cell-free extracts, biosynthesis of *p*-hydroxybenzoate from *p*-coumarate, *p*-coumaroyl-coenzyme A, 271
Liverwort, cytoplasmic ion activities, action potentials, 1073
Locus
fad8, second chloroplast ω-3 desaturase, *Arabidopsis thaliana*, 1609
phytoene desaturase, sequence, tomato, 789
Lupinus angustifolius, aspartate aminotransferase-P_2 gene, 1683
Lycopersicon esculentum (*see* Tomato)

M

Macronutrients, excess, mannitol metabolism, celery, 503
Maize (*see* Corn)
Malate, counteractive effects of abscisic acid and gibberellic acid, barley aleurone, 359
Malus domestica (*see* Apple)
Mandelonitrile lyase, immunocytochemical localization, stems and leaves, black cherry, 1285
Manganese-superoxide dismutase, differential accumulation of transcripts in maize, response to abscisic acid and high osmoticum, 173
Mannitol
gas exchange and carbon partitioning, root zone salinity, celery leaves, 281
metabolism, celery stressed by excess macronutrients, 503
Medicago sativa (*see* Alfalfa)
Membrane
biogenesis, small GTP-binding proteins, 1
Chara droplets, depolarization-activated K^+ channel, 313
localization of proteins, *Synechococcus* sp. PCC7942, 251
ripening of nectarine fruit, electrical impedance measurements, 165
stereospecificity and immunoreactivity, NADH-ferricyanide reductase, 1103
Mercury-insensitive aquaporin, homolog of tonoplast water channel protein TIP, *Arabidopsis thaliana* plasma membrane, 1325
Meristems, influorescence, control by developing fruits, *Arabidopsis thaliana*, 863
Mesophyll
beet leaf, iron deficiency, blue-green fluorescence, 127
two cell chloroplasts, *arc6*, fertile *Arabidopsis* mutant, 1169
Vicia faba, stimulation of K^+ activity, cAMP, 957
Metals, heavy, isoflavonoid metabolism, alfalfa, 195
Methyltransferase, pectin, root caps of pea, root border cell separation, 739
$Mg^{2+}/2H^+$ antiporter, solubilization and reconstitution, lutoid tonoplast, rubber tree latex, 79
Microelectrodes, root-hair cells of *Sinapis alba*, H^+/Cl^- symporter, 1131
Microsomes, membrane fraction of *Petunia hybrida* flowers, flavonoid 3′,5′-hydroxylase, 633
Mildew, acquired resistance in barley, 2,6-dichloroisonicotinic acid, 1269
Mineral, rhizotoxicity, Gouy-Chapman-Stern model, membrane-surface electric potential, 1583
Mitochondria
cryopreservation, tool for protein import in tobacco, organello protein synthesis studies, 159
leaves of different species, distribution, pyruvate dehydrogenase complex activities, 1633
mung bean, biosynthesis of cardiolipin, 1527
orf38/220, RNA editing, tobacco, 1223
pea, 3,5-dibromo-4-hydroxybenzonitrile, effects on bioenergetics, 1483
soybean, regulation of alternative oxidase activity, pyruvate, 1421
submitochondrial localization in maize, 32-kDa NADH dehydrogenase, 1115
Monoterpene
emission and floral scent production, *Clarkia*, 1533
regulation of oleoresinosis, grand fir, 999
Morinda citrifolia, cytoplasmic acidification, secondary metabolite production, 723
Morning glory, herbicidal activity, isopropylmalate dehydrogenase inhibitor, 321
Morphactin, *N*-1-naphthylphthalamic acid and, compression wood formation, *Pinus sylvestris* shoots, 469
Mosaic virus, tobacco, molecular cloning and gene expression, phenylalanine ammonia-lyase, 877
Mung bean
first foliage leaves of seedlings, ferredoxin-$NADP^+$ oxidoreductase isoforms, 697
hypocotyl, immobilized and free apoplastic pectinmethylesterases, 1151
hypocotyl cell walls, localization, phenoloxidase, 1095
mitochondria, biosynthesis of cardiolipin, 1527
Mustard, seed, ethylene production during development, 601
Myrica gale, root nodules, actylene to $^{15}N_2$ conversion ratio, 1041

N

NADH dehydrogenase
32-kDa, submitochondrial localization, maize, 1115
subunit 4 of *Synechocystis* 6803, deletion of structural gene, alteration of respiratory properties, 1435
NADH-ferricyanide reductase, stereospecificity and immunoreactivity, plant membranes, 1103
NADPH-cytochrome *c* reductase, purification and characterization, *Petunia hybrida* flowers, 643
NADPH-cytochrome P450 oxidoreductase, yeast, rat cytochrome P4501A1, fused enzyme expressed by herbicide-resistant tobacco plants, 17
NADPH dehydrogenases, purification and characterization, root plasma membrane, onion, 87

NADP$^+$ reductase, ferredoxin, cDNA clone, *Chlamydomonas reinhardtii*, 1715
N-1-Naphthylphthalamic acid, morphactin and, compression wood formation, *Pinus sylvestris* shoots, 469
Nectarine, fruit ripening, electrical impedance measurements, 165
Nicotiana plumbaginifolia, mRNA accumulation of antioxidant genes, ozone, sulfur dioxide and UVB, 1007
Nicotiana sylvestris, wild-type and starchless mutant, CO_2 uptake and electron transport, 679
Nicotiana tabacum (*see* Tobacco)
Nitrate
  cytoplasmic ion activities, liverwort, 1073
  nitrite efflux and, stimulation by ammonium, barley seedlings, 1293
  permeability, anion selectivity, plasma membrane of guard cells of *Vicia faba*, 383
  reduction and expression of enzymes, anaerobic germination, rice, 1605
Nitrate reductase
  genes in *Arabidopsis thaliana* 5′ proximal regions, nitrate-induced transcription in transgenic tobacco, 477
  induction and turnover, corn, 1145
  posttranslational regulation, higher plants, 817
  regulation in corn leaf, gene expression and protein phosphorylation, 1667
Nitrogen
  acetylene to $^{15}N_2$ conversion ratio, *Myrica gale* root nodules, 1041
  differential induction, poplar bark storage protein, related wound-induced gene, 211
  use in C_3 and C_4 cereals, 407
Nitrogenase, regulation of activity, role of oxygen, drought-stressed soybean nodules, 949
Nuclear proteins, differential binding, *Cat1* catalase promoter, corn, 1373
Nucleoside diphosphate, structure and function of Golgi complex, rice cells, 119
Nucleotides
  complete sequence, potato tuber acid invertase cDNA, 397
  genomic sequence, proteinase inhibitor II gene, potato, 1681
  protein sequences and, cytoplasmic ribosomal protein S15a gene, *Arabidopsis thaliana*, 401
  sequence of a pollen-sensitive cDNA, sunflower, 403
  sequence of cDNA
    Carthamus tinctorius encoding glycerol-3-phosphate acyl transferase, 1713
    heat-shock protein from barley, 815
    P2 60S acidic ribosomal protein, *Parthenium argentatum*, 395
  sequence of maize cDNA, class II acidic β-1,3-glucanase, 1709
  sequence of nuclear tRNA^{Gly} gene, *Eleucine coracana*, 1217
  sequence of tomato *psbS* gene, 1703

O

Oat, root tip cells, endoplasmic reticulum and provacuoles, vacuolar-type H$^+$-ATPases, 1313
Octadecanoid, signaling pathway, inhibition by diethyldithiocarbamic acid, proteinase inhibitors in tomato leaves, 337
Oenothera (*see* Primrose, evening)
Oilseed, high-oleate, failure to develop at low temperature, *Arabidopsis thaliana*, 421
Oleoresinosis, regulation in grand fir, 999
Onion
  Fourier-transform Raman and Fourier-transform infrared spectroscopy, cell walls and their components, 1623
  root plasma membrane, purification and characterization, NAD(P)H dehydrogenases, 87
Opium poppy, cDNA encoding a low molecular mass heat-shock protein, 811
Oryza sativa (*see* Rice)
Osmoticum, abscisic acid and, differential accumulation of manganese-superoxide dismutase transcripts, maize, 173
Oxygen
  cell damage and light stress, photoautotrophic cell suspension, *Euphorbia characias*, 941
  oxidative stress in mature-senescent barley leaves, sensitivity, superoxide dismutase transcript levels, 1033
  regulation of nitrogenase activity, drought-stressed soybean nodules, 949
  respiratory uptake, acclimation of field-grown native species, long-term exposure to elevated atmospheric CO_2, 1163
Ozone, mRNA accumulation of antioxidant genes, *Nicotiana plumbaginifolia*, 1007

P

Palmitic acid, elongation, deficiency, *Arabidopsis thaliana* mutant, 143
Paraheliotropism, control in two bean species, 1567
Parsley, immediate activation of respiration, *Phytophthora megasperma* f. sp. *Glya* elicitor, 1541
Parthenium argentatum (*see* Guayule)
Pathogens, fungal, plant defense response, 97
Pea
  chloroplast inner envelope vesicles, K$^+$-stimulated ATPase, ATP-dependent proton concentration, 731
  chloroplasts, intrathylakoid pH, violaxanthin deepoxidation, 1647
  control of internode length, involvement of indole-3-acetic acid, 1521
  distribution of pyruvate dehydrogenase complex activities, chloroplasts and leaves, 1633
  epicotyls, differential changes in size distribution, xyloglucan in cell walls, 755
  herbicidal activity, isopropylmalate dehydrogenase inhibitor, 321
  leaf, developmental age and gene expression, chlorophyll and heme biosynthesis, 537
  mitochondria, 3,5-dibromo-4-hydroxybenzonitrile, effects on bioenergetics, 1483
  photosynthetic acclimation, high atmospheric CO_2 partial pressure, 661
  root caps and root border cell separation, pectin methyltransferase activity, 739
  seed, *lox1:Ps:2* lipoxygenase gene, 1227
  seedling, amine oxidase, crystalline studies, 1205
Peach, leaf, modeling carbon export out, 591
Pectate lyase E, three-dimensional structure, virulence factor for *Erwinia chrysanthemi*, 849
Pectin
  biologically active oligomers, ripening tomato fruit, 575
  methylesterase activity reduction, modification of tissue integrity and cation levels, ripening tomato, 429
  methyltransferase activity in root caps, root border cell separation, pea, 739
  rhamnogalacturonan α-L-rhamnopyranohydrolase, *Aspergillus aculeatus*, 241
Pectinmethylesterases, free apoplastic or immobilized, mung bean hypocotyls, 1151
Pelargonium, 1-aminocyclopropane-1-carboxylate oxidase cDNA sequence, 797
Peptide-proton cotransport, broad bean leaf tissues, 1023
Percea americana (*see* Avocado)
Peroxisome, membrane proteins, influence of light, sunflower cotyledons, 293
Petroselinum crispum (*see* Parsley)
Petunia
  S-ribonuclease gene, expression in nonstylar tissue, immature anthers, 25
  ubiquitous protein in organs, 58-kilodalton calmodulin-binding glutamate decarboxylase, developmental regulation, 1381
Petunia hybrida
  cytoplasmic acidification, secondary metabolite production, 723
  flowers
    microsomal membrane fraction, flavonoid 3′,5′-hydroxylase, 633
    purification and characterization, NADPH-cytochrome *c* reductase, 643
pH
  acetate and, regulation of periplasmic carbonic anhydrase expression, *Chlamydomonas reinhardtii*, 103
  counteractive effects of abscisic acid and gibberellic acid, barley aleurone, 359
  homeostasis, role of γ-aminobutyric acid, ammonium assimilation in carrot cell suspension, 513
  intrathylakoid, violaxanthin deepoxidation, pea chloroplasts, 1647
Phaeodactylum tricornutum, effects of excess irradiance, photosynthesis, 763

Phaseolus vulgaris (*see* Bean)
Phenoloxidase, localization, mung bean hypocotyl cell walls, 1095
Phenylalanine ammonia-lyase, molecular cloning and gene expression, tobacco, 877
Phosphate, chloroplast, alteration of the amount of translocator, transgenic tobacco, 1123
Phosphotyrosine phosphatase, significant activity, potato tuber acid phosphatase, 223
Photorespiration, efficiency of nitrogen use, C_3 and C_4 cereals, 407
Photosynthesis
acclimation in pea and soybean, high atmospheric CO_2 partial pressure, 661
effects of excess irradiance, *Phaeodactylum tricornutum*, 763
induction and turnover, nitrate reductase, corn, 1145
localization of membrane proteins, *Synechococcus* sp. PCC7942, 251
photoautotrophic cell suspension, light stress and oxidative cell damage, *Euphorbia characias*, 941
release of protein catabolites, blebbing from thylakoids, bean, 1547
short-term shift to low temperature, long-term cold hardening, winter rye, 983
Photosystem I
light-harvesting complex, organization, assembly during plastid development, 841
polypeptides, organization, *Synechocystis*, 1057
reducing side, identification of surface-exposed domains, *Synechocystis*, 617
Photosystem II, light-harvesting complexes, assembly, 829
Phycobilisome, *Spirulina maxima*, transient association of new proteins, relation to light intensity, 747
Phytic acid, specificity of hydrolysis, alkaline phytase, lily pollen, 1489
Phytoene desaturase, locus in tomato, sequence, 789
Phytophthora megasperma, f. sp. *Glya* elicitor, immediate activation of respiration, parsley, 1541
Phytosiderophores, uptake of iron, iron inefficiency, maize mutant ys1, 71
Picea abies (*see* Spruce, Norway)
Pigmentation, assembly of light-harvesting complexes, photosystem II, 829
Pine, Scots
cDNAs corresponding to two *Lhcb4* alleles, 1693
Lhcb5 cDNA, 1695
shoot, compression wood formation, *N*-1-naphthylphthalamic acid and morphactin, 469
Pinus sylvestris (*see* Pine, Scots)
Pisum sativa (*see* Pea)
Plant Gene Register
1-aminocyclopropane-1-carboxylate oxidase cDNA sequence, *Pelargonium*, 797
Arabidopsis thaliana, *PHYC* gene, 813
aspartate aminotransferase-P_2 gene, *Lupinus angustifolius*, 1683
barley *Kas* gene family, β-ketoacyl-acyl carrier protein synthesis, 1711
cDNA and derived amino acid sequence, chloroplastic copper/zinc-superoxide dismutase, aspen, 1231
cDNA clone encoding ferredoxin-$NADP^+$ reductase, *Chlamydomonas reinhardtii*, 1715
cDNA cloning and nucleotide sequences, α_1 and α_2 thionins, hexaploid wheat endosperm, 1221
cDNA encoding a low molecular mass heat-shock protein, opium poppy, 811
cDNA encoding a new GTP-binding protein, ADP-ribosylation factor family, *Arabidopsis thaliana*, 809
cDNA encoding HD-Zip protein, sunflower, 1687
cDNA encoding ribosomal protein S16, cotton, 1219
cDNAs corresponding to *Lhcb4* alleles, Scots pine, 1693
cDNAs for isoforms of the Δ^9-stearoyl-acyl carrier protein desaturase, *Thunbergia alata* endosperm, 807
Citrus paradisi, gene *c-ino* homology to *tur1* and *ino1* from yeast and *Spirodela*, 1689
cloning and sequencing, serine/threonine protein kinase, *Arabidopsis thaliana*, 1229
cloning of a cDNA, encoding of 3-keto-acyl-acyl carrier protein synthase III, *Arabidopsis thaliana*, 801
complete nucleotide sequence, potato tuber acid invertase cDNA, 397
detection and sequencing, transposable element ILS-1, Illinois long-term selection maize strains, 803
DNA topoisomerase II cDNA, *Arabidopsis thaliana*, 1701
drought-induced soybean cDNA, D95 family late-embryogenesis-abundant protein, 805
ERD15, *Arabidopsis thaliana*, 1707
gene encoding acetyl-coenzyme A carboxylase, *Brassica napus*, 793
genomic nucleotide sequence
proteinase inhibitor II gene, potato, 1681
tomato *Asr2*, 1699
genomic sequence of calnexin homolog, *Arabidopsis thaliana*, 1691
Lhcb5 cDNA, Scots pine, 1695
lox1:Ps:2, pea, 1227
multiple cDNAs, vacuolar H^+-ATPase subunit B, developing cotton ovules, 393
nucleotide and protein sequences, cytoplasmic ribosomal protein S15a gene, *Arabidopsis thaliana*, 401
nucleotide sequence
cDNA for P2 60S acidic ribosomal protein, *Parthenium argentatum*, 395
maize cDNA, class II acidic β-1,3-glucanase, 1709
nuclear $tRNA^{Gly}$ gene, *Eleucine coracana*, 1217
pollen-specific cDNA, sunflower, 403
tomato *psbS* gene, 1703
nucleotide sequence of cDNA
Carthamus tinctorius encoding glycerol-3-phosphate acyl transferase, 1713
heat-shock protein from barley, 815
primary leaf catalase gene, *Nicotiana tabacum* and *N. sylvestris*, 399
ribulose-1,5-bisphosphate carboxylase/oxygenase small subunit gene, fern *Pteris vittata*, 1685
rice full-length cDNA clone, encoding of a polyubiquitin, 791
RNA editing, tobacco mitochondrial orf38/220, 1223
sequence, phytoene desaturase locus, tomato, 789
third highly conserved group 1 Lea gene, *Arabidopsis thaliana*, 787
three different cDNAs encoding acyl carrier proteins, *Cuphea lanceolata*, 785
Plasma membrane
Arabidopsis thaliana, mercury-insensitive aquaporin, homolog of tonoplast water channel protein TIP, 1325
guard cells of *Vicia faba*, slow anion channels, anion selectivity, 383
H^+-ATPase genes in tomato, assessment of number and expression, 547
host redox reactions, G-protein-mediated changes, tomato, 97
onion root, purification and characterization, NAD(P)H dehydrogenases, 87
salt-induced 60-kilodalton protein, extreme halotolerance, *Dunaliella salina*, 1359
sucrose-H^+ symporter, kinetic analysis, sugar beet leaves, 991
Plastid
class I and cytosol class II aldolase, *Euglena gracilis*, 1137
development, organization, light-harvesting complex of photosystem I, 841
Plastome-genome incompatibility, genetically programmed chloroplast dedifferentiation, *Oenothera*, 367
Poa ampla, infected host grass, abundant expression, endophytic fungal proteinase, 1
Pollen
lily, specificity of hydrolysis of phytic acid, alkaline phytase, 1489
-sensitive cDNA, nucleotide sequence, sunflower, 403
Polyclonal antibodies, purification and characterization, cinnamoyl-coenzyme A:NADP oxidoreductase, *Eucalyptus gunnii*, 625
Polygalacturonase, isozyme 1, tomato fruit, 1461
Polypeptides
differential exudation by roots, response to aluminum stress, *Triticum aestivum*, 151
photosystem I, organization, *Synechocystis*, 1057
Polypogon, Fourier-transform Raman and Fourier-transform infrared spectroscopy, cell walls and their components, 1623
Polysaccharides, aluminum-induced inhibition of cell-wall components, squash root seedlings, 971

Polyubiquitin, rice full-length cDNA clone, 791
Pomoea purpurea (*see* Morning glory)
Poplar, bark storage protein and related wound-induced gene, differential induction, nitrogen, 211
Populus deltoides (*see* Poplar)
Populus tremula (*see* Aspen)
Populus tremuloides (*see* Aspen)
Potassium
cytoplasmic ion activities, liverwort, 1073
-stimulated ATPase, ATP-dependent proton concentration, inner envelope vesicles of pea, 731
stimulation of activity by cAMP, mesophyll cells, *Vicia faba*, 957
transient currents, action potential, *Chara inflata*, 651
Potassium channel
depolarization-activated, *Chara* droplets, 313
regulation in two types of leaf cells, protein phosphatases 1 and 2A, *Vicia faba*, 963
Potato
cell-suspension cultures, low water potential, short- and long-term changes in gene expression, 703
genomic nucleotide sequence, proteinase inhibitor II gene, 1681
membranes, stereospecificity and immunoreactivity, NADH-ferricyanide reductase, 1103
proteinase inhibitor II gene family in transgenic tobacco, peptide with homology to potato chymotrypsin inhibitor I, 771
sweet, block of sugar-inducible gene expression, inhibitors of protein phosphatases 1 and 2A, 567
tuber acid invertase cDNA, complete nucleotide sequence, 397
tuber acid phosphatase, significant phosphotyrosine phosphatase activity, 223
wounding in tubers, induction of translation, elongation factor 1 subunit α, 897
Primrose, evening, consequence of plastome-genome incompatibility, genetically programmed chloroplast dedifferentiation, 367
14–3–3 protein, similarity to 30-kilodalton protein, fusicoccin receptor preparations, 1497
Proteinase
endophytic fungal, abundant expression, infected host grass, 1
inhibitor II gene, genomic nucleotide sequence, potato, 1681
inhibitor II gene family in transgenic tobacco, peptide, homology to potato chymotrypsin inhibitor I, 771
inhibitors in tomato leaves, wound induction, inhibition of octadecanoid signaling pathway by diethyldithiocarbamic acid, 337
Protein kinases, posttranslational regulation of nitrate reductase, higher plants, 817
Protein phosphatases 1 and 2A
block of sugar-inducible gene expression, sweet potato, 567
regulation of K^+ channels, two types of *Vicia faba* leaf cells, 963
posttranslational regulation of nitrate reductase, 817
Proton
ATP-dependent concentration, inner envelope vesicles of pea, K^+-stimulated ATPase, 731
-peptide cotransport, broad bean leaf tissues, 1023
Protoplasts
endosperm, transformed maize aleurone, regulation of gene expression, 929
transport of ascorbic and dehydroascorbic acids, barley leaves, 187
Prunasin hydrolase, immunocytochemical localization, stems and leaves, black cherry, 1285
Prunus persica (*see* Nectarine; *see also* Peach)
Prunus serotina (*see* Cherry, black)
Pteris vittata, ribulose-1,5-bisphosphate carboxylase/oxygenase small subunit gene, 1685
Pumpkin, germinating seeds, reformation of central vacuole, accumulation of H^+-pyrophosphatase and H^+-ATPase, 61
Pyruvate, regulation of alternative oxidase, soybean mitochondria, 1421
Pyruvate dehydrogenase, distribution of activities, chloroplasts and mitochondria from leaves of different species, 1633

Q

Quenching, nonphotochemical, light harvesting, regulation in green plants, 415
Quillwort, corm, expression, sporophytic storage proteins, 1395

R

Receptors, fusicoccin, 30-kilodalton protein, 14–3–3-like protein, 1497
Redox reactions, host plasma membrane, G-protein-mediated changes, tomato, 97
Respiration
alteration of patterns and deletion of structural gene, NADH-dehydrogenase subunit 4, *Synechocystis* 6803, 1435
immediate activation, *Phytophthora megasperma* f. sp. *Glycinea* elicitor, parsley, 1541
silencing and overexpression of alternative oxidase, transgenic tobacco, 1503
Rhamnogalacturonan α-L-rhamnopyranohydrolase, specificity for terminal nonreducing rhamnosyl unit, rhamnogalacturonan regions of pectin, *Aspergillus aculeatus*, 241
Rhizosheaths, formation and stabilization, soil water content, corn, 179
Rhizotoxicity, mineral, Gouy-Chapman-Stern model, membrane-surface electric potential, 1583
S-Ribonuclease, gene expression in nonstylar tissue, immature anthers, *Petunia hybrida*, 25
Ribosomes, cytoplasmic protein S15a, nucleotide and protein sequences, *Arabidopsis thaliana*, 401
Ribulose-1,5-bisphosphate carboxylase/oxygenase
short-term shift to low temperature, long-term cold hardening, winter rye, 983
small subunit gene, fern *Pteris vittata*, 1685
Rice
anaerobic germination, expression of enzymes, nitrate reduction, 1605
full-length cDNA clone, encoding of a polyubiquitin, 791
loss of DNA-binding activity upon phosphorylation, group of chromosomal proteins, 559
posttranscriptionally modified 18-kilodalton protein, eukaryotic translation initiation factor, 1413
structure and function of Golgi complex, 119
under submergence stress, differential transcript levels of genes associated with glycolysis and alcohol fermentation, 1015
tall and dwarf mutants, metabolism of gibberellin A_{20} to gibberellin A_1, 1367
triosephosphate isomerase gene 5′ sequence, β-glucuronidase activity, intron needed for expression, 459
Ripening
avocado fruit development, regulation, glutamate dehydrogenase and glutamine synthetase, 217
cloning of two tomato lipoxygenase genes, differential expression, 109
-induced *Asr1* gene family, genomic nucleotide sequence of *Asr2*, tomato, 1699
nectarine fruit, electrical impedance measurements, 165
tomato, modification of tissue integrity and cation levels, reduction in pectin methylesterase activity, 429
tomato fruit, cell wall metabolism, 575
RNA
-binding protein gene, encoding of multiple mRNAs with different 5′ ends, *Arabidopsis* chloroplasts, 303
editing, tobacco mitochondrial orf38/220, 1223
messenger
accumulation of antioxidant genes, ozone and sulfur dioxide, *Nicotiana plumbaginifolia*, 1007
differential induction, glycolytic and ethanolic fermentative pathways, hypoxia and anoxia in corn seedling, 1575
H^+-ATPase genes in tomato, assessment of number and expression, 547
multiple (different 5′ ends), *Arabidopsis* chloroplast RNA-binding protein, 303
regulation of gene expression, transformed maize aleurone and endosperm protoplasts, 929

Root
alfalfa, immersion in heavy metals, isoflavonoid metabolism, 195
corn, growth maintenance, low water potentials, 607
-hair cells of *Sinapis alba*, H^+/Cl^- symporter, 1131
hair initiation in *Arabidopsis thaliana*, *rhd6* mutation, auxin- and ethylene-associated process, 1335
Myrica gale, acetylene to $^{15}N_2$ conversion ratio, 1041
oat, endoplasmic reticulum and provacuoles, vacuolar-type H^+-ATPases, 1313
onion, plasma membrane, purification of NAD(P)H dehydrogenases, 87
pea, border cell separation, pectin methyltransferase activity, 739
soybean, rapid uptake of aluminum, 1107
squash seedling, aluminum-induced inhibition, changes in cell-wall components, 971
Trichosanthes kirilowii, defense-related proteins, 1195
Triticum aestivum, response to aluminum stress, differential exudation of polypeptides, 151
Rubber tree, lutoid tonoplast, solubilization and reconstitution, $Mg^{2+}/2H^+$ antiporter, 79
Rye, winter
long-term cold hardening, short-term shift to low temperature, photosynthesis, 983
freezing tolerance, dehydrin gene expression, 1213

S

S16, cDNA, cotton, 1219
Salicylic acid-binding activity and inhibitable catalase activity, variety of plant species, 1675
Salinity
choline-*O*-sulfate biosynthesis, various plants, 1187
root zone, gas exchange and carbon partitioning, celery leaves, 281
Salt-induced 60-kilodalton plasma membrane protein, extreme halotolerance, *Dunaliella salina*, 1359
Scent, floral, production in *Clarkia*, 1533
Scirpus olneyi, long-term exposure to elevated atmospheric CO_2, acclimation, respiratory O_2 uptake, 1163
Secale cereale (*see* Rye, winter)
Seed
bean, gene activation, mediation by Cre/*lox* site-specific recombination system, 447
canola and mustard, ethylene production during development, 601
pea, *lox1*:*Ps*:2 lipoxygenase gene, 1227
pumpkin, reformation of central vacuole, accumulation of H^+-pyrophosphatase and H^+-ATPase, 61
Seedling
barley, stimulation of nitrate and nitrite efflux, ammonium, 1293
beet, prolonged dark growth, modifications of etioplasts in cotyledons, 1555
black cherry, use of amygdalin, 437
cereal, gene expression and source/sink relations, metabolite signals, 1235
corn, glycolytic and ethanolic pathways, differential mRNA induction and hypoxia and anoxia, 1575
mung bean, first foliage leaves, ferredoxin-$NADP^+$ oxidoreductase isoforms, 697
pea, amine oxidase, crystalline studies, 1205
squash root, aluminum-induced inhibition, changes in cell-wall components, 971
Self-incompatibility, S-ribonuclease gene expression in nonstylar tissue, immature anthers, *Petunia hybrida*, 25
Serine/threonine protein kinase, cloning and sequencing, *Arabidopsis thaliana*, 1229
Setaria faberi (*see* Foxtail, giant)
Shikimic acid, immediate activation of respiration, *Phytophthora megasperma* f. sp. *Glycinea* elicitor, parsley, 1541
Shoot
apical, *Populus tremula* × *Populus tremuloides*, metabolic pathway, 1511
Pinus sylvestris, *N*-1-naphthylphthalamic acid and morphactin, compression wood formation, 469
Silene alba, cell-suspension cultures, carbon starvation, endoglycosidase activities and production of "unconjugated *N*-glycans," 779
Sinapis alba
circadian oscillations of a transcript, germin-like protein, 905
root-hair cells, H^+/Cl^- symporter, 1131
Sink, source relations and gene expression, metabolite signals, cereal seedlings, 1235
Soil, water content, formation and stabilization of rhizosheaths, corn, 179
Solanum tuberosum (*see* Potato)
Sorbitol, transient Cl^- and K^+ currents, action potential, *Chara inflata*, 651
Soybean
drought-induced cDNA, D95 family late-embryogenesis-abundant protein, 805
drought-stressed nodules, role of oxygen, regulation of nitrogenase activity, 949
ferric leghemoglobin reductase, overproduction in *Escherichia coli*, 203
herbicidal activity, isopropylmalate dehydrogenase inhibitor, 321
mitochondria, regulation of alternative oxidase activity, pyruvate, 1421
nodules, acclimation, changes in temperature, 263
photosynthetic acclimation, high atmospheric CO_2 partial pressure, 661
root tips, rapid uptake of aluminum, 1107
salicylic acid-binding activity, salicylic acid-inhibitable catalase activity, 1675
SAUR promoters, auxin-inducible element, tobacco, 37
Spartina patens, long-term exposure to elevated atmospheric CO_2, acclimation, respiratory O_2 uptake, 1163
Spermine, group of chromosomal proteins specifically released, loss of DNA-binding activity, phosphorylation, 559
Sphingolipid, toxin-induced disruption of metabolism, accumulation, free sphingoid bases, 1085
Spinach
distribution of pyruvate dehydrogenase complex activities, chloroplasts and leaves, 1633
14–3–3-like protein, 30-kilodalton protein, fusicoccin receptor preparations, 1497
membranes, stereospecificity and immunoreactivity, NADH-ferricyanide reductase, 1103
Spirodela, homology of c-*ino* gene, *Citrus paradisi*, 1689
Spirulina maxima, phycobilisome, transient association of new proteins, relation to light intensity, 747
Spruce, Norway, needles, apoplastic peroxidases, lignification, 53
Starch
amount of chloroplast phosphate translocator, distribution of assimilate, transgenic tobacco, 1123
wild-type and starchless mutant of *Nicotiana sylvestris*, CO_2 uptake and electron transport rates, 679
Stearic acid, increased levels, *Arabidopsis* mutant, 1443
Δ^9-Stearoyl-acyl carrier protein desaturase, cDNAs for isoforms, *Thunbergia alata* endosperm, 807
Stem, black cherry, immunocytochemical localization, prunasin hydrolase and mandelonitrile lyase, 1285
Storage product, genes, coordinated transcriptional regulation, corn endosperm, 713
Storage proteins, sporophytic, quillwort corm, 1395
Stress
-ripening-induced *Asr1* gene family, genomic nucleotide sequence, tomato, 1699
submergence, differential transcript levels of genes associated with glycolysis and alcohol fermentation, 1015
Sucrose, $-H^+$ symporter, plasma membrane, kinetic analysis of sugar beet leaves, 991
Sucrose phosphate synthase, short-term shift to low temperature, long-term cold hardening, winter rye, 983
Sugar
amount of chloroplast phosphate translocator, distribution of assimilate, transgenic tobacco, 1123
-inducible gene expression, block by inhibitors of protein phosphatases 1 and 2A, sweet potato, 567
Sulcotrione, inhibition of 4-hydroxyphenylpyruvate dioxygenase, barnyardgrass, 1429
Sulfur dioxide, mRNA accumulation of antioxidant genes, *Nicotiana plumbaginifolia*, 1007

Sunflower
cDNA encoding HD-Zip protein, 1687
choline-*O*-sulfate biosynthesis, 1187
cotyledons and influence of light, peroxisome membrane proteins, developmental pattern, 293
partitioning of leaf CO_2 exchange, CO_2 exchange and fluorescence measurements, 689
pollen-sensitive cDNA, nucleotide sequence, 403
Superoxide dismutase
copper/zinc, cDNA and derived amino acid sequence, aspen, 1231
sensitivity of transcript levels, oxidative stress, mature-senescent barley leaves, 1033
Synechococcus, sp. PCC7942, localization of membrane proteins, 251
Synechocystis
identification of surface-exposed domains, reducing side, photosystem I, 617
NADH-dehydrogenase subunit 4, deletion of structural gene, alteration of respiratory properties, 1435
organization, photosystem I polypeptides, 1057

T

Temperature
changes, acclimation, soybean nodules, 263
low
BN115 gene, winter *Brassica napus*, 917
failure of high-oleate oilseeds to develop, *Arabidopsis thaliana*, 421
short-term shift, long-term cold hardening in winter rye, 983
tomato fruit, polygalacturonase isozyme 1, 1461
Temperature-regulated gene, chloroplast ω-3 desaturase, *Arabidopsis thaliana*, 1615
Thermotolerance, disruption of kernel growth and development, heat stress, corn, 45
Thionins, α_1 and α_2 hexaploid wheat endosperm, cDNA cloning and nucleotide sequences, 1221
Threonine dehydratase, inhibition, *Arabidopsis thaliana*, 1257
Thuja occidentalis, tracheids, collapse, water-stress emboli, 1639
Thunbergia alata, endosperm, cDNAs, isoforms of the Δ^9-stearoyl-acyl carrier protein desaturase, 807
Thylakoid membranes, biogenesis, initial greening, *Chlamydomonas reinhardtii*, 583
Thylakoids, blebbing, release of photosynthetic protein catabolites, bean, 1547
Tobacco
auxin-inducible element, soybean SAUR promoters, 37
block of sugar-inducible gene expression, protein phosphatases 1 and 2A, 567
cryopreservation of mitochondria, tool for protein import, organello protein synthesis studies, 159
β-glucuronidase activity, rice triosephosphate isomerase 5′ sequence, 459
induction of ethylene biosynthesis, *Trichoderma viride* xylanase, accumulation of 1-aminocyclopropane-1-carboxylic acid synthase and ACC oxidase transcripts, 1049
mitochondrial orf38/220, RNA editing, 1223
N. tabacum and *N. sylvestris*, primary leaf catalase gene, 399
production of antibacterial proteins, expression, human lactoferrin cDNA, 977
salicylic acid-binding activity, salicylic acid-inhibitable catalase activity, 1675
toxin-induced disruption of sphingolipid metabolism, accumulation, free sphingoid bases, 1085
transgenic
modulation of cysteine biosynthesis, chloroplasts, 887
molecular genetic alteration, 1503
nitrate-induced transcription, 5′ proximal regions of *Arabidopsis* nitrate reductase genes, 477
potato proteinase inhibitor II gene family, peptide with homology to potato chymotrypsin inhibitor I, 771
tobacco, molecular cloning and gene expression, phenylalanine ammonia-lyase, 877
Tomato
1-aminocyclopropane-1-carboxylate synthase turnover, regulation, protein phosphorylation and dephosphorylation, 529
Asr2, genomic nucleotide sequence, 1699
cloning of two lipoxygenase genes, differential expression, fruit ripening, 109
fruit polygalacturonase isozyme 1, 1461
leaf, diethyldithiocarbamic acid, inhibition of octadecanoid signaling pathway, 337
metabolic control of anaerobic glycolysis, lactate dehydrogenase, 1179
psbS gene, nucleotide sequence, 1703
P-type H^+-ATPase genes, assessment of number and expression, 547
ripening fruit
cell wall metabolism, 575
modification of tissue integrity and cation levels, reduction in pectin methylesterase activity, 429
salicylic acid-binding activity, salicylic acid-inhibitable catalase activity, 1675
selection for cadmium tolerance, increased activity, γ-glutamylcysteine synthetase, 233
sequence of phytoene desaturase locus, 789
toxin-induced disruption of sphingolipid metabolism, accumulation, free sphingoid bases, 1085
Tonoplast
lutoid, rubber tree, solubilization of $Mg^{2+}/2H^+$ antiporter, 79
water channel protein TIP homolog, mercury-insensitive aquaporin, *Arabidopsis thaliana* plasma membrane, 1325
Tracheids, *Thuja occidentalis*, collapse, water-stress emboli, 1639
Transposable element, ILS-1, detection and sequencing, Illinois long-term selection maize strains, 803
Trichoderma viride, xylanase, induction of ethylene biosynthesis, tobacco, 1049
Trichosanthes kirilowii, transformed root cultures, biosynthesis, defense-related proteins, 1195
Triosephosphate isomerase, 5′ sequence, β-glucuronidase activity, intron needed for expression in rice, 459
Triticum aestivum, root, response to aluminum stress, differential exudation of polypeptides, 151
Typha latifolia, leaf, assimilation, arenchyma carbon dioxide, 1065

U

Ultraviolet B, mRNA accumulation of antioxidant genes, *Nicotiana plumbaginifolia*, 1007

V

Vacuole
H^+-pyrophosphatase, cDNA, beet, 375
42-kilodalton annexin-like protein, celery, 1403
membrane transport of ascorbic and dehydroascorbic acids, barley leaves
reformation in germinating pumpkin seed, accumulation of H^+-pyrophosphatase and H^+-ATPase, 61
ripening of nectarine fruit, electrical impedance measurements, 165
Vicia faba (*see* Broad bean)
Vigna radiata (*see* Mung bean)
Violaxanthin, deepoxidation, intrathylakoid pH, pea chloroplasts, 1647
Virluence factor, pectate lyase E, three-dimensional structure, *Erwinia chrysanthemi*, 849

W

Water
deficit, response of fructan, growing leaves of tall fescue, 329
low potential, short- and long-term changes in gene expression, potato cell-suspension cultures, 703
soil content, formation and stabilization of rhizosheaths, corn, 179
-stress emboli, collapse of, tracheids of *Thuja occidentalis*, 1639
Wheat
distribution of pyruvate dehydrogenase complex activities, chloroplasts and leaves, 1633
embryo germination, biological activity, 7′-methyl group of abscisic acid, 1279
endosperm, cDNA cloning and nucleotide sequences, α_1 and α_2 thionins, 1221
membranes, stereospecificity and immunoreactivity, NADH-ferricyanide reductase, 1103

Wound
-induced gene and bark storage protein, differential induction by nitrogen, poplar, 211
induction of proteinase inhibitors in tomato leaves, inhibition of octadecanoid signaling pathway, diethyldithiocarbamic acid, 337
Wounding, potato tubers, induction of translation, elongation factor 1 subunit α, 897

X

Xylanase, *Trichoderma viride*, induction of ethylene biosynthesis in tobacco, 1049
Xyloglucan
cell walls of gravitropically responding pea epicotyls, differential changes in size distribution, pea epicotyls, 755
endotransglycolase, root growth maintenance at low water potentials, corn, 607

Y

Yeast
homology of *c-ino* gene, *Citrus paradisi*, 1689
NADPH-cytochrome P450 oxidoreductase and rat cytochrome P4501A1, fused enzyme, herbicide-resistant tobacco plants, 17

Z

Zeamatin-like protein gene, characterization and expression, corn, 1471
Zea mays (*see* Corn)
Zinc-copper-superoxide dismutase, cDNA and derived amino acid sequence, aspen, 1231
